

## Warm Tube Clock v2 - menu

Menu for Warm Tube Clock v2 firmware „03d-06m-2011y“.

Bank	Option	Description
01	Set RTC	Setting RTC time, date and time&date display format. Setting is <b>always</b> performed in this format: <b>HH:MM DD.MM.YYYY</b> and 24-hour format. <b>HH:xx</b> – hours (00-23, setting hours always in 24 hour format) <b>xx:MM</b> – minutes (00-59) <b>DD.xx</b> – day of month (01-31) <b>xx.MM</b> – month (01-12) <b>20YY</b> – year (2000-2099) <b>xx12/24</b> – hour format (12 or 24)
02	Alarm Time	Setting the alarm time. <b>HH:xx</b> – hours (00-23, setting hours always in 24 hour format) <b>xx:MM</b> – minutes (00-59)
03	Display Modes	Setting modes and mode times/durations. Display can show: TIME, DATE, TEMPERATURE, SECONDS. <b>1x:SS</b> – showing time (00(off)-99 duration) of TIME in seconds, <b>2x:SS</b> – showing time (00(off)-99 duration) of DATE in seconds, <b>3x:SS</b> – showing time (00(off)-99 duration) of TEMPERATURE in seconds, <b>4x:SS</b> – showing time (00(off)-99 duration) of SECONDS in seconds.
04	Display Brightness	Set maximum Nixie Tube brightness. Value of: XXXX-4095, where 4095 is maximum brightness and XXXX is a value that is automatically derived from „Display SYNC*“ option after first clock-startup. It is almost always around ~3860 and that is when Nixies are completely off.
05	Time LEDs	Mix RGB color for displaying when TIME is displayed on tubes. Tubes first show: R-G-B-RESULTING_COLOR where you can set Red, Green and Blue values and see resulting color. Next display will show <b>xxx0</b> or <b>xxx1</b> which means: LEDs disabled or enabled.
06	Date LEDs	Mix RGB color for displaying when DATE is displayed on tubes. Tubes first show: R-G-B-RESULTING_COLOR where you can set Red, Green and Blue values and see resulting color. Next display will show <b>xxx0</b> or <b>xxx1</b> which means: LEDs disabled or enabled.
07	Date Display Fading	Set brightness of tubes for DATE display. Tubes first show: <b>XXXX</b> where you can set tube brightness, where <b>4095</b> is maximum and <b>XXXX</b> current value. Next display will show <b>xxx0</b> or <b>xxx1</b> which means: Dimming with preset value disabled or enabled.
08	Temperature LEDs	Mix RGB color for displaying when DATE is displayed on tubes. Tubes first show: <b>R-G-B-RESULTING_COLOR</b> where you can set Red, Green and Blue values and see resulting color. Next display will show <b>xxx0</b> or <b>xxx1</b> which means: LEDs disabled or enabled.
09	Auto-OFF Time	This option will save your Nixie tubes from glowing when not necessary. Here you will set two times: ON time, and OFF time (both in 24-hour format). Tubes first show: ON time. <b>HH:xx</b> – hours (00-23, setting hours always in 24 hour format) <b>xx:MM</b> – minutes (00-59) Next, tubes will show OFF time in same format: <b>HH:xx</b> – hours (00-23, setting hours always in 24 hour format) <b>xx:MM</b> – minutes (00-59) Next, tubes will show <b>xxx0</b> or <b>xxx1</b> to disable or enable the Auto-OFF option.
10	Cross Fading	This option will enable or disable the tube Cross Fading option, and cross fading speed. Tubes first show: <b>SSSxx</b> – speed of cross-fader where <b>001</b> is minimum value and maximum value is around <b>50</b> (variable depending on tube types). Recommended value for this is between <b>10-25</b> . Next display will show <b>xxx0</b> or <b>xxx1</b> which means: cross-fading disabled or enabled.
11	Display SYNC*	Calibration of „last-off“ value for Nixie Tube display. You can start this option if cross-fading or auto-off option is not working properly.
12	Candle Mode	Candle flickering simulation mode – for a bit of romance.
13	Return...	Save settings and return to normal display mode.
